Clean, reliable, quick:
 Unloading with OKUSLIDE®, the
 truck lining from OKULEN®

A worn truck bed makes unloading ever more time-consuming and more dangerous, because the load only starts to slide at extreme angles.

With OKUSLIDE®, the plastic truck bed lining which can be retro-fitted, you ensure that your load slides off the truck bed quickly and with no appreciable residue left in the truck.

You are on the right track with OKUSLIDE® from OKULEN®

- Excellent sliding properties for quicker, easier unloading.
- Very high wear resistance – at least 50% less wear than aluminium truck beds.
- Significantly less adhesion of sticky bulk goods and almost no problems in freezing conditions.
- Quick, cost-effective installation.
- Increased safety when unloading thanks to a lower tipping angle.
- Shorter downtimes, avoidance of empty journeys thanks to a cleaner truck bed.
- Resistant to a multitude of acids and alkalis.

OKUSLIDE® pays off: Whether for new vehicles or replacement truck beds, take advantage of the cost benefits of OKUSLIDE®

Double the wear resistance of conventional truck beds made from aluminium – that alone quickly pays off. Added to this are daily savings thanks to reduced unloading times, reduced need for cleaning and fewer empty journeys. Arguments that always say good things for OKUSLIDE®.

While others are still shovelling, I am back on the road to the next loading site thanks to OKUSLIDE®.

Safety plays a major role for us and our employees. Low tipping angles are the solution to the problem thanks to OKUSLIDE®.

We have been able to drastically reduce our repair and maintenance costs thanks to the use of wear-resistant OKUSLIDE® materials!

Even for new vehicles which are not yet equipped with it as standard, the additional investment pays off. OKUSLIDE® is particularly attractive for second-hand vehicles, of course, on which the truck bed needs to be repaired or replaced. There is no comparable alternative on the market to the cost-effective installation of an OKUSLIDE® lining.

The standard OKUSLIDE® version is Premium Blue 5893 – the all-rounder for almost all applications. **Other grades are available on request.**

OKUSLIDE® Premium Blue 5893

The premium grade for almost all applications

Whether extremely low temperatures are giving you problems unloading or whether you expect protection of your truck bed to be the most important property of a lining; you can rely on our expertise obtained over many years of installation experience.

OKUSLIDE® Premium Blue FN5893 is a highly wear-resistant plastic which offers an excellent balance of wear-resistance, impact resistance and sliding properties.

With the installation of a UV-resistant OKUSLIDE® lining, the plastic lining from OKULEN® that can be retrofitted, you ensure that your load slides off the truck bed quickly and with no appreciable residues. Special additives embedded in the material ensure outstanding sliding properties.

OKUSLIDE® Tough Blue 5874

Long-lasting and impressive

Do you already have experience with our OKUSLIDE® lining?

Then you appreciate the outstanding balance of OKUSLIDE® Premium Blue FN5893 with regard to wear resistance and impact protection. And of course, you are familiar with the significantly improved sliding behaviour of your bulk goods in your dump truck.

But do you need a vehicle lining with even better wear resistance for some applications?

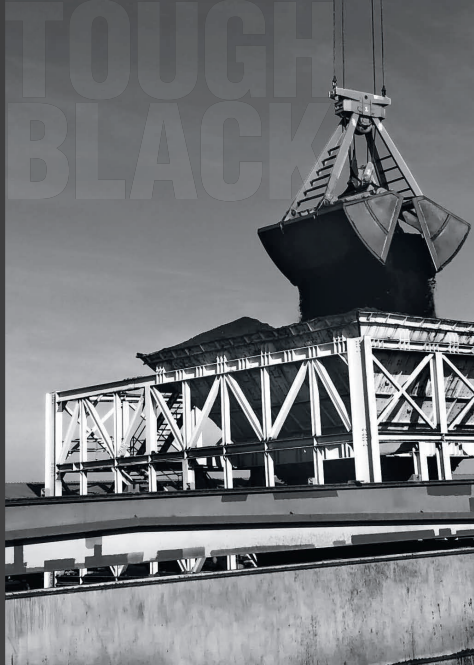

Then we offer: OKUSLIDE® Tough Blue 5874. This material combines the benefits of our high-quality OKUSLIDE® Premium Blue 5893 standard product with an improved service life.

The alternative material composition with a light blue colour was specially developed in order to extend the useful life of the installed lining.

OKUSLIDE® Tough Blue 5874 has particularly impressed its users when transporting highly abrasive bulk goods.

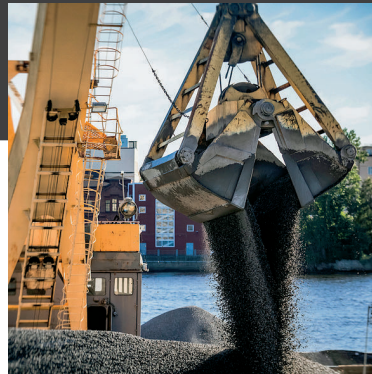

OKULEN® Tough Black 9694

Our electroconductive material
for bunkers, chutes and hoppers

OKULEN® Tough Black 9694 has maximum wear resistance, good sliding properties, good notched impact strength and anti-static properties, all combined in one material.

Our OKULEN® Tough Black 9694 is recommended if you also need the highly wear-resistant material for your fixed linings in chutes, hoppers or bunkers to have anti-static or electroconductive properties.

Roll on, fit, done: That's how easy installation is

If you still have questions about OKUSLIDE® it is best to call us directly. We are happy to advise you. More information can be found at:
www.okuslide.com

It could hardly be more flexible: any dump truck can be lined with OKUSLIDE® – anywhere that our installation partners are located. Because the material can be sent on rolls up to a thickness of 15 mm. Our installation partners are happy to offer the installation of the OKUSLIDE® lining in your area.

OKULEN® considers it a matter of course that our installations are not only quick, but are more cost-effective than welding on new aluminium or steel sheets, for example.

A safe investment with OKUSLIDE® from OKULEN®:

- We can send our linings anywhere in the world as sheet products or as a continuous length on a roll.
- Special requirements? We work out the right solution with you!
- OKUSLIDE® is also particularly suitable for lining wheel loader buckets, conveyor channels and bunkers. We are happy to advise you.
- Whether at your site or in our own factory – our teams will carry out the installation.
- Multiple locations with installation partners in Germany.
